```

- + Funciona basicamente igual nosso terminal linux
- + Se dermos o

Ele mostra os encoders, os payloads, os módulos de exploração etc

+ Para visualizar todos os módulos auxiliares,

```
show auxiliary
```

- + Para usar algum módulo, vamos usar o use
- + Ao usarmos use auxiliary/ e dermos um tab duplo, ele vai nos mostrar as outras opções.
- + No caso, se quisermos um portscan, fazemos

```
use auxiliary/scanner/portscan + tab tab
```

```
<u>msf6</u> > use auxiliary/scanner/portscan/
use auxiliary/scanner/portscan/ack use auxiliary/scanner/portscan/syn
use auxiliary/scanner/portscan/ftpboun<u>c</u>e use auxiliary/scanner/portscan/tcp
```

use auxiliary/scanner/portscan/xmas

+ Quando ele ficar vermelho é por que iniciou o módulo

```
msf6 > use auxiliary/scanner/portscan/tcp
msf6 auxiliary(scanner/portscan/tcp) >
```

- + Pra visualizar, podemos dar um info
- + Para ver as opções, show options

msf6 auxiliary(scanner/portscan/tcp) > info Name: TCP Port Scanner Module: auxiliary/scanner/portscan/tcp License: Metasploit Framework License (BSD) Rank: Normal Provided by: hdm <xahdm.io> kris katterjohn <katterjohn@gmail.com> Check supported: No Basic options: Current Setting Required Description Name CONCURRENCY 10 ves The number of concurrent p The delay between connecti DELAY 0 ves: The delay jitter factor (m JITTER yes Ports to scan (e.g. 22-25, PORTS 1-10000 ves The target host(s), see ht RHOSTS yes The number of concurrent t THREADS yes The socket connect timeout TIMEOUT 1000 yes Description: Enumerate open TCP services by performing a full TCP connect on ea This does not need administrative privileges on the source machine may be useful if pivoting. View the full module info with the info -d command. msf6 auxiliary(scanner/portscan/tcp) > show options Module options (auxiliary/scanner/portscan/tcp): Current Setting Required Description Name The number of concurrent CONCURRENCY 10 ves

+ Para setar um endereço de IP nesse RHOSTS é muito simples:

set RHOSTS 172.16.1.7

+ Pra que o script comece a rodar, adivinha:

run

+ Para ver tudo o que ele pode buscar, executamos

search -h

+ Podemos fazer uma pesquisa do seguinte tipo:

search type:auxiliary smnp ou rdp, ou smp, ou portscan e assim vai

+ Poderíamos também fazer a busca por exploits ao invés de módulos auxiliares

search type:exploits smnp

+ Com o comando back, a gente volta.
